EDUCATION

University of California, Merced

Expected May 2027

B.S. in Computer Science & Engineering

Merced, CA

- **Relevant Coursework:** Data Structures, Algorithm Design & Analysis, Computer Architecture, Database Systems, Full-Stack Web Development, Linear Algebra

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, Go, PowerShell, HTML/CSS, R

Frameworks & Libraries: React, React Native, Flask, SQLAlchemy, Node.js, Next.js, Pandas, NumPy, TensorFlow

Tools & Platforms: PostgreSQL, AWS, Docker, Git, GitHub Actions, Linux, Vercel, Render

Concepts: REST API Design, Relational Data Modeling, Data Pipelines, Authentication, Object-Oriented Design, CI/CD

EXPERIENCE

Website & Web App Student Lead

Oct. 2026 – Present

UC Merced – Basic Needs Center

Merced, CA

- Maintain and improve the Basic Needs website UI with accessibility and cross-browser/mobile standards.
- Partner with staff to ship content updates and new features, supporting Google Drive, Qualtrics, and Calendly.

Software Engineering Intern

May 2025 – Jul. 2025

Robotics Cats

CA

- Built a PowerShell monitoring service polling 120 camera endpoints on 30–120s intervals into an auto-updating JSON state file, replacing manual status checks with a single source of truth for endpoint health.
- Developed a React Native + Flask OCR pipeline processing 40 receipts/day at 96% accuracy, auto-syncing extracted line items to Google Sheets and eliminating 120 min/day of manual entry.
- Integrated Gemini LLM endpoints into a Python/Flask + React/Vite service deployed on AWS, generating quiz content dynamically at request time.

Student Technology Consultant

Aug. 2023 – Oct. 2026

UC Merced – Office of Information Technology

Merced, CA

- Resolved 80+ ServiceNow tickets across OS, networking, AV hardware, and SaaS for enterprise classroom systems.
- Documented recurring failure patterns in Confluence as a first-stop runbook, reducing repeat escalations.

Undergraduate Research Assistant

Oct. 2022 – May 2023

UC Merced – LInC Lab

Merced, CA

- Automated cleaning of 600+ CSV files with Python/pandas, cutting processing time 30% and retrieval time 50%.
- Standardized data protocols across 4 research projects, reducing formatting inconsistencies 20%.

PROJECTS

Bobcat Bulletin | *Python, BeautifulSoup, Flask, React, PostgreSQL, GitHub Actions, Vercel*

- Built a scheduled scraper with change detection, storing UCM PD incident data in PostgreSQL for trend analysis.
- Replaced a hard-to-navigate institutional page with a searchable, filterable incident feed and map view.

LiftLabs | *React, Vite, Flask, SQLAlchemy, PostgreSQL, REST API, Vercel, Render*

- Built a fitness forum with JWT auth, role-based moderation, and server-validated one-vote-per-user enforcement.
- Deployed a production SPA across Vercel and Render, resolving cross-origin auth and file storage issues.

Greenview | *JavaScript, Chrome Extension API, Manifest V3, HTML/CSS*

- Shipped a Chrome/Firefox extension tagging 1000+ job listings by ATS, using MutationObserver for DOM detection.

OpenGL Paint Application | *C++, OpenGL*

- Engineered a 2D paint app in C++/OpenGL with dynamic memory management and OOP, cutting render lag 15%.
